Underground Lawn Sprinkler Specialists

Service Options

Industry Leaders Since 1974

ReliABLE and DependABLE

After four decades of installations and service in the Metro Vancouver area, we're focusing our talents on service for **residential** and **commercial** properties. However, if you are looking for a new installation we can still help you, with an expert design (fees may apply), consultation, and an installation.

Please call or email us if you need professional care, and high quality upgrades to your existing inground sprinkler system.

Call 604-584-7676

licensed & insured

Service Options

Spring Start-Up Service

We re-activate your system from the isolation valve and adjust the sprinkler heads, nozzles, and valves, checking for and repairing any obvious minor deficiencies. All repairs are billed as extras, at flat rate prices. Larger repairs or upgrades will be noted on your invoice. A quotation or a further site visit will be advised or scheduled.

Mid-Season Check Up

We offer residential and commercial Mid-Season Checkups. Perhaps you are an absentee owner, have a larger residential system or a commercial property. We can provide a monthly or mid-season visit for system monitoring. We will ensure your irrigation system is well-maintained and operating efficiently. A mid-season or monthly visit will alleviate call-out fees for repairs or adjustments that go unnoticed.

Water Conservation

The following are highly recommended to minimize your water usage:

- High Efficiency Sprinklers
- Rain Sensor
- Moisture Sensor
- Pressure Reducer Valve (PRV)
- Smart Irrigation Controller
- Site Assessment

To learn more, call us or visit us online!

Winter Shut-Down Service

We winterize your sprinkler system by turning off the isolation valve at the main connection. The technician then blows out the water through all the piping, valves, and heads with a suitably sized air compressor (185 CFM). If we miss seeing you and have no access to your panel, we "bled" the solenoid valves from outside. In this case, please ensure that you put your controller in the OFF position or RAIN position for the winter. It is advisable to install a surge protector. This will protect the unit from surges and power outages. If your surge protector is blinking, it has been "hit" and needs replacing.

Upgrading or Overhauling an Aged System

If you've made changes to your landscape, it's a good idea to have us review the design of your current irrigation system. We can recommend enhancements that will meet the needs of all of your plants and trees in the most efficient manner. Able Irrigation repairs all types of underground irrigation systems. We keep detailed records that ensure the proper parts are on hand when our team arrives, saving time and avoiding additional expense to you. Our certified team can look after all these issues. Call or email us to quote the changes and upgrades you need most.

Landscape Lighting

Accent your home, your garden and enhance your home security with landscape lighting. Partnered with Unique Lighting Systems, we can provide the highest in quality lighting systems, along with the ULS lifetime warranty*. **Call us today to bring light to your landscape!**

*on all transformers and select lights licensed and bonded low voltage contractor #14884

Backflow Testing

Your backflow assembly protects your potable water and the city's potable water supply from contamination in a negative pressure situation. Lawn sprinkler systems run the risk of back-siphoning contaminants from your lawn including animal feces, fertilizers, herbicides, pesticides, or anything near a sprinkler head or broken pipe. As required by the city, your backflow assembly must be tested yearly by a certified technician. Able Irrigation employs BCWWA-certified technicians.

Double Check Valve Assembly

Keep Your Water Safe!

Point of Connection

The most important component of your system is the main connection assembly. This is where the supply to your in-ground system starts and stops. This is also the location of your backflow device, pressure reducer valve and the location of the tee into your household or commercial water supply. You want the best, we install only the best. High quality brass components, sized to your system's requirements, and all to code. If your point of connection is leaking, difficult to turn off, or not up to your city's bylaw, **call us today!**

Brass Shutoff Valve
